

SDGs 6: Clean Water and Sanitation
GDSO 5: People Live in Sustainable Environments

Good Water Station

The Good Water Station provides access to safe and clean water for communities in rural areas. This project improves the community's awareness of water and health, generates income, and sustains their neighbors' well-being.

The project improves community people's knowledge about health and safety by providing resources and expertise to safeguard good health and well-being.

Mission

Impoverished communities in the rural areas of Cambodia have access to affordable clean water.

Goal

Ensure improved water sources for community people and strengthen community awareness of the importance of consuming clean water.

Project Approaches

Establish Water Station

Construct a central station, install purification and sanitation facilities near community households, and set standard operation procedures to ensure water quality. Additionally, the station creates income-generation opportunities for community people.

Raise Community Awareness

Promote communities' knowledge of the difference between contaminated and clean water, the advantages of clean water, and how to maintain good health.

Project Activities

CONSTRUCTION

Partner with experts to construct water stations that meet safety standards.

WATER STATION COMMITTEE

Form a committee to monitor the water purification process and the social enterprise, and establish sustainability project.

WATER DELIVERY

Support transportation and business ideas to deliver bottles of clean water to customers and consumers.

AWARENESS PROGRAM

Conduct awareness training on safe drinking and consumption practices to committee and communities regularly.

CLEAN WATER Sustainable Community

Project Beneficiaries

The Good Water Station is operated and led by communities to support people in households and schools in Cambodia's rural areas.

The beneficiaries are primarily indigenous people, living with dangerous drinking habits, lack of awareness of clean water, and lack of finances to afford clean water.
